Abstract (en)

[origin: EP1849731A1] The method involves winding the pad coil with constant bobbin speed. The pad coil is wound with a high bobbin speed, particularly a bobbin speed by five and with a small thread distance. The random winding is switched after winding the pad coil in the winding method. An independent claim is also included for a device to coil continuously running thread on a casing to a cross wound bobbin.
