Abstract (en)
[origin: EP1849929A2] The canopy has a holder (2) is formed as an acute angle triangle and the upper edges (3) of the holder are at right angle from the wall. The roof tile (1) is connected with two cross beams that are connected crosswise on the holder, whose upper edges (6) are curved in arched-shaped. The other cross beam connected with tile (1), is provided with longitudinal holes at a distance from the holder shortly before the end of tile (1), which is adjusted in length and breadth of the cross-section of the holder. The cross beam (5) with its long holes is suspended on the front, narrow end of the holder. The rear cross beam (4) with its slots (9) is adjustable concurrently over the upper edges (3) of the holder (2) to stop the rear disk edge to the wall.
