Abstract (en)
[origin: EP1849951A2] The system has a sliding panel (2), which is driven by a driving device (5), where the driving device is controlled by an electronic control device. The driving device is designed such that the panel is opened, when an emergency signal is available for opening an escape route. A locking device is provided for locking the system in an operating condition. An activating device (8) is provided for unlocking the locking device and for opening the panel.
