Abstract (en)

[origin: EP1850264A1] A data management system that enables data on a network such as an internal LAN to be integratedly managed and is able to reliably prevent the data from leakage is proposed. A data management system 1 has a network to which a management server 4 for data management, a plurality of client PCs 3 having a data processing function, an optical disk publisher 5 that issues a CD or a DVD into which the data is recorded are connected. The data prepared in the respective client PCs 3 is performed by issuing the CD by the optical disk publisher 4. The optical disk publisher issues the CD to only an authorized user.
