Abstract (en)

[origin: EP1850310A2] The system (1) has a locking unit attached to one of interference sections and preventing shifting of the interference sections within recesses in a locking position. The locking unit enables shifting of the interference sections for the removal of a sign module (8) in a releasing position. The locking unit comprises a strip-shaped cover (24) movably accommodated in a base (2), where the cover rests at the interference section in the locking position.
