Abstract (en)

[origin: WO2006074763A1] The invention relates to a piece of furniture, in particular, a seat, comprising a second piece (12) which may be adjusted relative to a first piece (10) of the furniture and drive means for adjusting the second piece (12) relative to the first piece (10). According to the invention, the second piece (12) is provided with at least two drive units (8, 20), whereby, in a first kinematic phase, the adjuster movement for the adjustment occurs by means of a first drive unit (18) and, in a second kinematic phase, the adjuster movement occurs by means of a second drive unit (20). The second piece (12) moves relative to the first piece (10) in the first kinematic phase and in the second kinematic phase an essentially equivalent adjustment movement, for example a pivoting, is carried out.
