Abstract (en)

[origin: WO2006084277A2] A gaming machine (100) includes a number of game implementation devices, each adapted to be placed alternatively in an enabled or disabled condition. Each respective game implementation device is operable to implement at least a portion of a respective game at the gaming machine (100) when the respective game implementation device is in its enabled state in the gaming machine. The gaming machine (100) also includes an enabling arrangement for selectively placing any of the respective implementation devices in the enabled state. A video display (104) is included in the gaming machine (100) for displaying graphic portions of a respective one of the games when the respective game is implemented at the gaming machine (100).
