Abstract (en)
[origin: WO2006085884A1] A shaving apparatus (10) is provided that includes a razor cartridge (12), a shaving aid dispenser (14), and a reservoir (16) operable to contain a non-solid shaving aid material. The shaving aid dispenser includes one or more valves (24) disposed within a contact panel (26). The contact panel is disposed adjacent the cutting edges of the one or more razor blades. Each of the valves is selectively operable between an open position and a closed position. The valves are operated by the normal force of the contact surface applied to the surface to be shaved. The reservoir is in fluid communication with the selectively operable valves.
