Abstract (en)  
[origin: US2008092707A1] A fence ruler for table circular saws includes a longitudinally extending profiled hollow body of mostly rectangular cross-section mountable onto a machine table. One side of the profiled hollow body is formed as a guiding leg with a protruding extension having on its front edge a guiding ruler for guiding lower work pieces. The guiding leg may also be positioned on the machine table to extend at a right angle from the same. A slide is positioned within the hollow space in the hollow body and is movable longitudinally from the outside. At least one catch protrudes from the hollow body and is guided through a longitudinal slot in the profiled hollow body that opens to the outside through an opening slot in the guiding ruler.
