Abstract (en)

[origin: WO2006074619A1] The invention deals with a thin-walled compressible package where on the compressible package transversal recesses are created and where the principle is that the recesses (1) are created in at least four layers where in each layer there are at least two recesses (1) and at the same time the recesses (1) in one layer are always in the position under and/or over the contact place of the recesses (1) created in the neighbouring layers or under and/or over the gap between the recesses (1) created in the neighbouring layers while at the same time the recesses (1) in the neighbouring layers partly overlap each other with their side margins (11) with regard to the longitudinal axis from the axial point of view.
