Abstract (en)
[origin: WO2006090095A1] Apparatus for gripping pliable sheet materials including at least first and second elongated substantially linear jaw members (30,43), the jaw member (30) being complementary to jaw member (43), and mounting means (36,37) for mounting the jaw member (30) to allow it to conform longitudinally to the other jaw member (43) to enable the material to be clamped fully along the length of the jaw members (30,43). Typically the gripping apparatus is incorporated in a dispenser (10) and the gripping apparatus includes a pair of upper jaw members (29,30) and a pair of complementary lower jaw members (42 and 43) between which the material may be gripped for severing by a severing blade (49).
