Abstract (en)

[origin: WO2006077574A2] A holder for enabling a user to hold and to dispense a pressure-flowable product, such as ice-cream or other relatively soft food product. The holder includes a housing having an internal compartment for the pressure-flowable product. One end of the housing is formed with one or more dispensing openings for dispensing the product. The holder is constructed such that the volume of the compartment may be progressively decreased by the user to progressively force the product within the compartment through the dispensing opening of the housing for consumption by the user. In many described preferred embodiments, the housing is shaped like a toy figure making the holder particularly attractive to children.
