Abstract (en)

[origin: WO2006089521A1] The invention relates to a fixing system for at least one fluidic component (4) of a chromatography device, in particular for fixing said fluidic component(s) (4) in a column oven. According to the invention, the system is equipped with at least one brace (2), on which at least one fixing element (3) is detachably fixed in the desired position within a fixing region (2e) of the brace (2) by means of a friction or positive fit. The brace or braces (2) is or are fixed in a predetermined position by means of one or more support elements (1) and the fixing element or elements (3) is or are configured to receive and fix the fluidic component(s) (4). The invention also relates to a fixing element for a fixing system of this type, in which a first section (31) of the fixing element (3) is connected to a second section (33) of the fixing element (3) in such a way that the fluidic component (4) that is to be held and fixed is retained between two clamping areas of the first (31) and second (33) sections in a friction or positive fit.
