Abstract (en)

[origin: WO2006086285A2] Channel configuration information is sent to a content service, and the content service determines content to be provided in each channel of a set of channels using the channel configuration information. The channel configuration information also includes user preferences for determining hot content for a user. A device receives the content for the channels including the hot content. The device also receives updates for the hot content based on the user preferences.
