Abstract (en)

[origin: WO2006085237A1] The method of selecting content items of the invention comprises selecting (6) a subset of content items from a collection of content items in dependency of feedback gathered during a previous physical activity of a person (3). The subset is smaller than the collection of content items and the feedback comprises information regarding the previous physical activity. The electronic device of the invention comprises electronic circuitry operative to perform the method of the invention. The software of the invention enables a programmable device to perform the method of the invention.
