Abstract (en)

[origin: EP1852377A2] The device has an auxiliary stack supporting device (15) that has a guiding element (19), where a supporting element (20) is controlled in sliding manner. The supporting element is formed as roller and is connected by linkage elements, in such a manner that when combining an auxiliary stack (11) and a main stack (12) of the carrying elements that are connected over the linkage elements are deflected laterally beside the auxiliary stack and main stack and rolled up or deflected in vertical direction.
