Abstract (en)

[origin: EP1852878A1] The resistor has a resistor element provided with a housing element, where the resistor element is section-wise mounted between two electrically insulating, thermally conductive insulation elements in the housing element. The insulation elements are section-wise abutted against the housing element, where the resistor element is a wire, which is section-wise abutted against one of the insulation elements. A surface contour of the wire is pressed and/or impressed into the insulation element. The housing element is an extruded profile, which has opening that is sealed with an elastic seal (15). An independent claim is also included for a method for producing an electrical power resistor module for an electrical circuit.
