Abstract (en)
[origin: WO2006094611A1] Disclosed is an improved shelf system which is characterized by the following features: an anchoring pot (-13) is provided which can be inserted in a fixed and captive manner into a corresponding bore (11) of a shelf bottom (1), said bore (11) facing the shelf bottom support (3); a slot opening (17) and a screw path for a locking screw (21), which is offset relative thereto and runs diagonally, are provided in the anchoring pot (13); a portion of an anchoring section (31) that is part of the shelf bottom support (3) can be inserted into the slot (17); and the locking screw can be twisted in such a way that the shelf bottom support is directly or indirectly fixed at least in a non-positive and preferably a positive fashion.
