Abstract (en)

[origin: WO2006092477A1] The invention relates to a cooking utensil consisting of: a working container (11); a rotary tool (12) which is designed to rotate inside the working container (11); and a cover (13) comprising a detection element (40), which can move between a rest position in the absence of the working container (11) and an active position when the cover (13) is in place on the working container (11), and a protection element (50), which can move between a rest position in which the rotary tool (12) cannot be rotated and an active position in which the rotary tool (12) can be rotated. When in the rest position, the detection element (40) helps maintain the protection element (50) in the rest position. According to the invention, the detection element (40) and the protection element (50) are housed at least partially in the cover (13).
