Abstract (en)

[origin: WO2006092327A1] The invention relates to a medical tool (5) for cutting a hard material wall (7) comprising a rod (5i) provided with a working area (5c) on at least one part of the length thereof which carries out an abrasive action by vibration or rotation. The aim of said invention is to produce an easy to handle continuous incision of said hard material wall and, for this purpose, a flat guiding sliding element (5d) is provided on the front end of the rod (5i) in such a way that it is laterally and distantly placed from the rod under said hard material wall and the top side (5e) thereof is flat-shaped.
