Abstract (en)
[origin: WO2006092155A1] The invention relates to a preparation with an anti-microbial action for external use and pharmaceutical and/or cosmetic purposes, said preparation using nanoscalar silver that has been deposited on an inert support material, the coated support material being integrated into the preparation in the form of an intermediate product. Said preparation is characterised by a pasty consistency and by a contained intermediate product consisting of a fine-particled barium sulphate, or similar inert, medically safe inorganic compounds and/or micro-cellulose, onto which the nanoscalar elemental silver is deposited. The intermediate product preferably contains 0.1 to 50 mass % silver and the preparation contains 0.2 to 80 mass % intermediate product. The preparation can be used in a wide range of applications for reducing the symptoms of and therapeutically treating microbial infections of the skin, ENT regions and the anal and genital area and can also be used preventively.
