Abstract (en)
[origin: WO2006092472A1] The invention concerns a method for molding a profiled weatherstrip (1) made of plastic material consisting of several constituents, in particular a polyurethane-based material, on at least a peripheral portion of a glazing (2) using at least one injecting head (3), wherein said material ejected through an outlet (4) of the injecting head (3) penetrates into a molding cavity (5) to form said molded profiled weatherstrip. The invention is characterized in that the material ejected through the outlet (4) of the injecting head (3) penetrates directly into said molding cavity (5).
