Abstract (en)
[origin: WO2006096187A1] A container (12) for dispensing selected portions of a web material (30) and a method of making such a container are disclosed. The container (12) is arranged to contain the web material (30) and having an opening (29) through which the web material can be led out of the container. A slot (36) is positioned such that web material led out of the container through the opening can be laid across the slot. A cutter (38) is capable of sliding along the slot and of cutting web material laid across the slot. At least one cling strip (50), of a material that displays the phenomenon of cling with the web material, is applied to the surface of the container alongside the slot.
