Abstract (en)  
[origin: WO2006094587A1] Disclosed is a shower device (10) which is attached (37) to a wall and is not connected in a fixed manner to the interior installation, or an additional hand shower. A hose (4) that extends from a plumbing fixture (1) to a hand shower (5, 45) is used for supplying said shower device (10) or hand shower. The hand shower comprises an outlet (24) for the water discharged from the hose. Said outlet can be joined to an inlet (20) into the shower device such that the water reaches the shower device via the hand shower. The inventive shower device can be a wall-mounted rod (11). Preferably, the connection that redirects the water is established by means of a mechanical coupling device.
