Abstract (en)
An element (1) for closing spaces (V) of boats comprising a shaped frame (2), which is associated perimetrically with the space (V) a laminar surface (3) that allows light to pass, associated with the shaped frame (2) so as to face the space (V) and restraining means (4), associated with the shaped frame (2), to partially open the space (V). The closing element (1) comprises locking devices (5) of the laminar surface (3) in the closed position of the space (V), associated with the shaped frame (2), and moving means (6) of the locking devices (5), which connect together the locking devices (5) and release the shaped frame (2) from the locking devices (5) to open the space (V).
