Abstract (en)
[origin: EP1854931A2] The method involves connecting wooden planks (1, 5, 8) to a joint by using a dowel (12). The planks are mounted individually or in groups such that an upper horizontal structure is partially constructed in a construction phase. The horizontal structure is composed of the planks (5) and serves as a support for a vertical structure consisting of the plank (1). The mounting of the planks are implemented in a progressive sequence such that different structures simultaneously form a lower structure serving as another support, anchorage and insertion fit in reference to the number of planks.
