Abstract (en)

[origin: EP1854942A1] The device has a shutter (33) pivotally mounted on a wall opposite to an opening permitting access to a lock of a swing gate. A shutter maintaining unit has a pin engaged across the shutter and a piece integrated to the wall in an active position of the shutter. A strike zone is supported on the shutter to rotatably drive the shutter to a retracting position using a key (20) e.g. spanner wrench, held by an authorized user e.g. firefighter. The key has a strike zone complementary to that of the former zone. A protuberance (36) has a rectilinear edge forming stop for the pivoting of the shutter.
