Abstract (en)

[origin: EP1854945A2] The system (1) has a set of locking units (3) positioned at a distance from each other, and a control unit (4) separated from the locking units for controlling the locking units. The control unit has two control disks, where one of the disks is connected with an operating unit and the other disk is connected with the locking units by a transmission unit (7). The two disks are decoupled based on an inactivating mechanism, and a third control disk is connected with the operating unit.
