Abstract (en)  
[origin: EP1854998A2] The device has a control device (12) regulating or switching a threshold in connection to interruption of a primary sided voltage and/or electric power supply of an ignition coil (3) during ignition. The device is in connection to the dropping in the primary voltage and/or primary current through the coil under an allowed threshold during the process of ignition of the voltage and/or the supply of the coil. The device regulates the threshold when an induced secondary current is operated in the direction of characteristics of the secondary current.
