Abstract (en)
[origin: EP1855052A2] The lamp has a reflector (1), separate base (2) i.e. screw-type base, and an electric lamp (3) i.e. arc lamp, that is held in the reflector and/or the base by a holding device (5) i.e. mount disk. The reflector and the base are in an assembled state, and form a connection region (6) between a reflector neck (11) and the base. The base and the reflector are arranged such that the base and the reflector are engaged one inside the other, and are assembled without the use of an adhesive. Two engaging elements (61) are formed on the reflector and/or on the base.
