Abstract (en)

[origin: EP1855252A2] The arrangement has the control module is freely connected with a processing unit (104.1) by a user. Franking information is formed such that it determines a part of the operation of the generation of the franking imprint. A base module (104) has a program memory (104.3) for storing a sequence program. The sequence program accesses the processing unit during generation of the franking imprint. An independent claim is also included for a method for providing franking imprint.
