Abstract (en)

[origin: EP1855277A2] It is an object to provide an optical recording medium-producing sheet that enables a protective layer or stamper-receiving layer to be formed easily and inexpensively and gives a good yield. A composition having an energy ray-curable component as a principal component thereof is applied onto a substrate 12, a coating layer thus obtained is irradiated with energy rays so as to semi-cure the energy ray-curable component, thus forming an energy ray-curable layer 11 having an adhesive strength of not less than 10 mN/25mm, and then a substrate 12' is superposed onto the energy ray-curable layer 11, whereby an optical recording medium-(optical disk-) producing sheet 1 is obtained.
