Abstract (en)

[origin: WO2006036085A1] The closure comprises a discharge sleeve (1), a collar (5) with an external thread at its outlet end, an inner hood (7) with a pouring tube at its outlet end, a removable check valve. The inner hood (7) is threadedly engaged on the collar of the discharge sleeve (1) thereby to allow its axial movement resulting from rotation. An outer hood (16) has a tamper-indicating means (19,20) at its outlet end, splines on its interior side surface thereby to engage splines on the inner hood, and transverse projections to interact with the inlet end of the outer pipe of the discharge sleeve. The mating surfaces of the pouring tube (9) and the plug (21) are tapered. The tamper-indicating means at the outlet end of the outer hood is made as a break-away member (19), or a solid annular break-away strap.
