Abstract (en)
[origin: GB2422819A] In a carton for beverage containers having a series of main panels (12-22) for forming a sleeve and having end closure panels (38-41) for closing the opposite ends of the sleeve, a carrying handle (84) is formed from a strap of material, each end of the strap (84) being secured between one of said end closure panels (38, 40) and an additional securing panel (65, 65a), each securing panel being connected to an adjacent end panel (38, 40) and folded into overlapping relationship therewith to sandwich the end of the strap (84) so that a strong reinforcement to the carrying handle is provided. The carrying handle is formed when the end closure panels (38, 40) are moved into a closed position such that at least a central portion of the strap stands proud of one of the main panels (18) so that the strap can be grasped by a user to carry the carton.
