Abstract (en)

[origin: FR2880011A1] The system has tubes distributing a chemical product e.g. isopropyl alcohol, from a storage tank towards a utilization point. One tube is made of a natural polymer such as polyethylene, polypropylene, polyvinylidene fluoride and polytetrafluoroethylene, and perfluoroalkoxy (PFA) which is a tetrafluoroethylene (TFE)/perfluoroalkyl vinyl ether copolymer or perfluoroalkoxyl alkane (MFA) which is a TFE/perfluoromethylvinyl ether copolymer. An independent claim is also included for a method of implementing a chemical product distribution system.
