Abstract (en)

[origin: WO2006091969A2] Gene expression analysis systems are provided for identifying the chemosensitivity gene profile of a cancer cell, the analysis systems comprising a plurality of polynucleotide probes, wherein each of said polynucleotide probes comprises a polynucleotide sequence that is complementary to a target region of a gene that encodes a protein associated with transport of molecules into and out of cells and that is a marker for the sensitivity or resistance of cancer cells to cytotoxic agents.
