Abstract (en)

[origin: FR2882377A1] The method involves digging trenches in soil up to a predetermined depth, where the trenches comprise vertical and horizontal grooves with different widths (L1, L2). The trenches are hollowed in a manner that the horizontal grooves are laterally adjacent. A processing liquid buried in the horizontal grooves of the trenches comprises a suspension material. An independent claim is also included for a device for implementing a method for processing soils.
