Abstract (en)

[origin: WO2006074767A1] The invention relates to a device for opening and/or closing a door comprising an electric motor and other electrical, mechanical, and/or hydraulic driving elements as well as a support (50) for accommodating the driving elements. The aim of the invention is to create a device for opening and/or closing a door in which the entire drive unit can be assembled using a few manipulations such that the drive can be serially produced with little effort. Said aim is achieved by plugging a preassembled motor-gear unit (20), a conductor card (30), and a harness with a transformer (40) into the support (50) and electrically interconnecting the same by means of a connecting plug (45).
