Abstract (en)

[origin: WO2006087502A1] The invention concerns a substrates having two main sides one of which comprises an antireflection coating, characterized in that, on said antireflection coating is deposited an outer layer in contact with air, of thickness not more than 10 nm, of which the surface energy is less than 60 mJ/m² and the surface has a contact angle with oleic acid less than 70°.
