Abstract (en)
[origin: WO2006055021A1] A system (100, 102) is used for dynamically pricing products available from one or more merchants. The system (100, 102) sends a first price for a product from a processor (104) to a customer device (108), and receives a report of sale for the product at the first price from a merchant computer. The system then determines a second price for the product based at least on the report of sale for the product at the first price, and sends the second price to the client customer device (108).

Citation (search report)
- [L] The claimed subject matter, with due regard to the description and drawings, relates to processes comprised in the list of subject matter and activities excluded from patentability under Art. 52(2) and (3) EPC. The applicant is advised that in accordance with the established practice of the EPO, no search need be performed in respect to those aspects of the claimed invention. The only identifiable technical aspects of the claimed invention relate to the use of conventional, general-purpose data processing technology for processing data of an inherently non-technical nature. The information technology employed is considered to have been generally known as it was widely to available to everyone at the date of filing/priority of the present application. The notoriety of such prior art cannot reasonably be contested. No documentary evidence was therefore considered required.
