Abstract (en)

[origin: WO2006075083A2] The invention relates to an aquatic loudspeaker of the type comprised of a sound-diffusion element associated with a coil (3) consisting of an insulating support (4) and of an electrical coil (5) being connected to a peripheral magnet (6) in such a manner as to effect the transformation of an electric voltage into a musical frequency. The invention is characterized in that the sound diffusion element is a diaphragm (2) consisting of a plastic circular planar wall of a predetermined thickness and assigned to a bell-shaped shell (7) that is also made of plastic.
