Abstract (en)

[origin: DE102006011093A1] The detector (1) has a sensor e.g. optical sensor, for detecting a dynamic state variable e.g. speed, of a track rope (2) of a lift, where the detector is arranged in direct proximity to the track rope. The sensor is provided in a base plate, and is not in contact with the track rope. A fastener is detachably fastened to a traction sheave (4), and includes a magnet. The fastener is clamped to the rope, and is fastened to a testing device and/or an accessory of the testing device. An independent claim is also included for a method for determining a dynamic state variable of a track rope of a lift.
