Abstract (en)
[origin: EP1857400A1] A jamb for an elevator has a back board fixed to an edge of a landing doorway, and a front board removably mounted on the back board. The front board is mounted on the back board, so a cylinder is formed. The front board has a front board body for surrounding a space between the back board and the front board except an opening facing a hoistway, and a sheathing board removably mounted on the back board and the front board body so as to close the opening.
