Abstract (en)

The invention relates to a safety precaution in the form of a railing (4, 5) to be displaced simultaneously with the wide slab (1), in which the construction workers (8) are optimally protected against falling to an underlying level, in which the wide slabs (1) will simultaneously be centered exactly between the bearing walls (6) owing to the special embodiment of the railing (4, 5) having single-sidedly slanted locators (7) with guiding plates (12).
