Abstract (en)

The platform has a sealed caisson connected to a compressor by flexible pipes, where coating e.g. polycarbonate coating, of the platform is transparent and translucent, and is remounted with its inflatable seal. The compressor supplies air volume trapped by the sealed caisson to generate a buoyancy adapted to a position of the platform with respect to depth of a swimming pool, where a surface of the platform is occupied by the sealed caisson. The flexible pipes are integrated inside studs, which are provided on vertical walls or in corners of the swimming pool.

Abstract (fr)

La présente invention se rapporte à une plateforme (2) de couverture de piscine (1) submersible et positionnable sur la profondeur de la piscine, ladite plateforme comportant au moins un caisson (5) étanche relié à un moyen de fourniture d'air (9,10), ledit moyen de fourniture d'air permettant d'apporter un volume d'air pouvant être emprisonné par ledit caisson étanche afin de générer une force d'Archimède permettant d'adapter la position de ladite plateforme par rapport au fond la piscine.
