Abstract (en)  
[origin: WO2006097629A1] The invention concerns the domain of food. More particularly, it concerns a composition, preferably a supplementary food composition, comprising at least one organic mineral salt, said organic mineral salt contributing to the alkaline potency in an amount ranging from 2 to 200 milliequivalent, capable of buffering an acid load of 20 to 200 milliequivalent of hydrogen ions H<SUP>+</SUP>, that is 20 to 200 mmoles of H<SUP>+</SUP>, preferably from 40 to 100 milliequivalent. Said composition is useful for preparing a composition for preventing digestive and urinary mineral and ionic losses, for preventing and/or treating metabolic acidosis, hypertension, cerebral strokes, type 2 diabetes, osteoporosis, urinary lithiases and aging.
