Abstract (en)

[origin: WO2006099195A2] The present invention provides an apparatus, kit and method for dispensing lids one at a time in a sanitary and effective manner. A stack of lids is placed inside a tube and substantially held in the tube by a cover piece. Preferably the cover piece is concave in shape and is opposed by a concave platform that biases the stack of lids towards said cover piece. The bottommost lid of the stack is available for dispensing while the next lid in the stack is restrained in place, preferably by elements associated with the cover piece.
