Abstract (en)

[origin: DE102005011313B3] The device (1) is assembled of two housings (4) positioned on top of a frame made of two H-profiles (2, 3) and containing the drive units. A control box with several levers (7, 8, 9, 10) is located at the front. The wheel rim is accommodated in the space between the housings (4) and fixed with bolts guided through the appropriate bores as at the vehicle. A shaping element (59) attached to a telescopically arranged hydraulically or pneumatically operated arm performs a pushing or pulling motion at the wheel rim as required.
