Abstract (en)
[origin: WO2006095082A1] The invention concerns an assembly comprising a flying balloon (100) and a tower (200). The balloon is captive and mobile in the tower. The captive balloon can ascend and descend along the tower with a limited wind intake or counterbalanced by the retention forces exerted by the tower, and can be flown up regardless of weather conditions without requiring a considerable and cumbersome stabilizing device. Such a balloon may be used as advertising sign and/or as an attraction.
