Abstract (en)

[origin: WO2006009483A2] A resealable flip top beverage can lid comprising a lid member having a seal defined by a scoreline, a tab pivotally mounted over said lid member, overlying said seal. Said tab having a hole punching lip and an extended Lifting section when lifted would cause the hole punching lip to punch the seal inwards to create an opening for dispensing of liquid. A resealing means is provided in the lower periphery of said lifting section so that when said lifting section is rotated to abut the seal, it would close the opening.
